

## SPONTANEOUS IGNITION

Many people do not believe it can happen. For no apparent reason fire erupts, usually during off hours. It *does* happen. It's called spontaneous ignition, and preventing it is part of your job.

Spontaneous ignition occurs when a combustible object is heated to its ignition temperature by a chemical reaction involving the oxygen in the air around us. This "oxidation" process creates heat that, if not dissipated, will build up until ignition occurs. Generally, this can happen when the materials are left in piles and the heat being generated in the pile cannot be released into the air.

A number of materials are moderately or highly subject to spontaneous heating and subsequent ignition. Some of those you may find in your work area include oil based paint in contact with rags, cotton, or other fibrous combustible material; rags that are damp with any one of a number of different types of oils, including vegetable oils; oily uniforms or work clothes; and paint scrapping, possibly coming from a paint spray booth cleaning project.

It is simple to prevent spontaneous ignition, since oxygen is needed for it to occur. Materials subject to spontaneous ignition should be stored in *covered* metal containers such as a rag safety can or trash can. Admittedly the container will contain oxygen at first. However, the oxidation process will use up the reaction and the reaction will stop-fire prevented.

Another strategy is to spread the combustible material out so the resulting heat can be dissipated rather than allowed to build up-again, fire prevented.

Proper housekeeping is the key to preventing fires. Remove debris from the building or vessel. Properly store combustibles in covered containers. Be sure the lids of containers remain in place-they are there for a purpose. Fire not only damages property, it threatens lives. By working to prevent fires, you also work to protect your life and the lives of your fellow Soldiers.

Have you witnessed the smoldering wreckage of someone else's property or workplace? It's not a pretty picture-don't let it happen to you!
